

Hello Boss,

I have researched which apps and services would be best for you to develop creative ads based on the examples shown.

Criteria:

- **Intuitiveness** - How easy it is to use without prior knowledge.
- **Features** - What options are there for developing projects(i.e., lasso, eraser, etc.).
- **Price** - Cost of using the app and accessing all features.

Recommendations:

1. Canva

Pros:

- Very easy to use with many drag-and-drop options for shapes, images, and styles
- The Free Version has more than enough features to create high-quality ads

Cons:

- Lacks advanced photo editing tools such as the lasso
- Premium required for unlimited access to specific templates

2. Photoshop

Pros:

- Has a plethora of tools that can be used for any photo editing need
- Many resources are available for learning how to operate the many valuable tools

Cons:

- Difficult to use if you are not already accustomed to photo editing tools
- There is no free version since there is access to many valuable tools

3. StoryArt

Pros:

- Tailored for social media stories, making it extremely easy to pick up and use
- Plenty of stylish templates are built for social media use

Cons:

- Geared toward social media use, making it less versatile for general use
- Premium features are locked behind a paywall

Personally, I would recommend using **Canva**. I have experience using it myself and concur that it is extremely easy to use and has plenty of free features that will allow you to make creative ads.
