

Technical Documentation Overview:

The Roommate Task Tracker app allows roommates to manage shared household tasks collaboratively. It includes task assignment, deadline setting, calendar integration, and automated reminders. The backend is built using Node.js and Express, while the frontend uses React, and the database is managed with MongoDB.

Architecture

- **Frontend:** Vue(JS/TS)
 - **Components:**
 - Task List - Displays a list of tasks for it to be managed by the user to manage
 - Task Form - Displays an interface for users to create and edit tasks
 - Calendar View - Shows future and current tasks to track their schedule
 - Reminder Notifications - Alerts, reminders, messages, etc, to the user
- **Backend:** Go Web Framework
 - Manages logic and handles API requests for creating, retrieving, and deleting.
 - REST API: Handles tasks
 - **Endpoints:**
 - `/Users`: Handles task-related operations
 - `/Tasks`: Handles user data and profiles
 - `/Groups`: Handles the creation and management of groups
- **Database:** SQLite
 - **Collections:**
 - `Users`: Contains user information
 - `Tasks`: Stores task details like tasks, names, assigned users, and deadlines.
 - `Groups`: Manages group data and associated tasks

Core Modules and Endpoints

1. **Task Module**
 - **Data Model:** Defines fields for `id`, `task_name`, `urgency`, `assigned_to`, `deadline`, and `is_recurring`.
 - **Endpoints:**
 - `POST /task`: Creates a new task
 - `GET /tasks`: Retrieves all tasks
 - `DELETE /tasks/{id}`: Deletes a task
